Grupa stručnjaka i zagrebačkih studenata arhitekture mjerila je od 3. do 16. kolovoza 2009. objekte i stanje na poluotoku Muzil. Cilj tog rada bila je priprema ovog elaborata koji će poslužiti studentima arhitekture sa nekoliko arhitektonskih fakulteta u Europi da, zajedno sa svojim mentorma, sljedeći semestar počnu promišljati budućnost Muzila.

Podaci o baštini Muzila su, zbog dugogodišnje vojne prisutnosti na tom prostoru, još uvijek nepoznati i stručnoj i široj javnosti. Mjerjenjem postojećeg stanja željelo se provjeriti kakav potencijal to područje već sada ima, označiti lokacije koje se mogu neposredno koristiti (poput igrališta, javnih površina), ali i objekte koji se mogu, uz minimalna ulaganja, osposobiti za korištenje (poput kuhinje, menze, restorana ili spavaonica). Taj materijal je potreban i stoga da bi građani na javnim raspravama o Muzilu imali uvid u sadašnje stanje, te podatke o toj dosad nepoznatoj lokaciji. Naime, sve rasprave do sada vodile su se bez poznavanja situacije na Muzilu.

Dozvolu za pristup Muzilu zatražio je, u ime Arhitektonskog fakulteta iz Zagreba, dekan prof. dr. sc. Lenko Pleština. Molba je poslana u lipnju 2009. Službi za odnose s javnošću i informiranje u sklopu MORH-a, koji je na nju pozitivno odgovorio, te tako omogućio pristup i rad tridesetero osoba u tom vojnem području.

Radni tim sačinjavali su arhitekti Ana Boljar, Ivana Debeljuh, Vjekoslav Gašparović, Juraj Glasinović, Emil Jurcan, Ida Križaj, Iva Marčetić, Jerolim Mladinov, Marko Perčić, Helena Sterpin, Edna Strenja, Leonid Zuban, studenti arhitekture Aleksandar Ćelović, Ana Grbac, Ana Habijanec, Dean Klemenc, Maja Lešnik, Kristina Perkov, Sara Perović, Denis Rubinić, Luka Tomić i Mirna Udovčić, dipl. ing. građevine Igor Bukarica, dipl. ing. šumarstva Christian Gallo, dipl. ing. biologije Ira Maslovar te povjesničar Goran Šaponja, a nadležna osoba iz Hrvatske vojske bio je stožerni narednik Stjepan Slonka.

Svako od sudionika proučavao je Muzil iz pozicije vlastite struke, a podaci koji su prikupljeni u relativno kratkom periodu trebali bi služiti građanima te stručnjacima za buduća slična istraživanja koja za cilj imaju upoznavanje ove lokacije, kao i njenu prenamjenu za opću dobrobit građana Pule.

Team of experts and students from Zagreb measured existing situation and buildings on Muzil from 3rd to 16th of August 2009. The goal of this work was to prepare the material presented in this study. Using this data students of architecture from a few European cities, together with their professors, will work on ideas for future development of Muzil peninsula.

Being that the area of Muzil was solely used as a military ground for more than 150 years, there is still a lot of unknown information accessible to the general public such as history, heritage and environment of this territory. By measuring a current situation the team wanted to examine the existing potential and to detect locations which can be used immediately (like sport fields or public surfaces) and buildings which can be adapted for future activity with minimal investment (like kitchen, restaurant or dormitories).

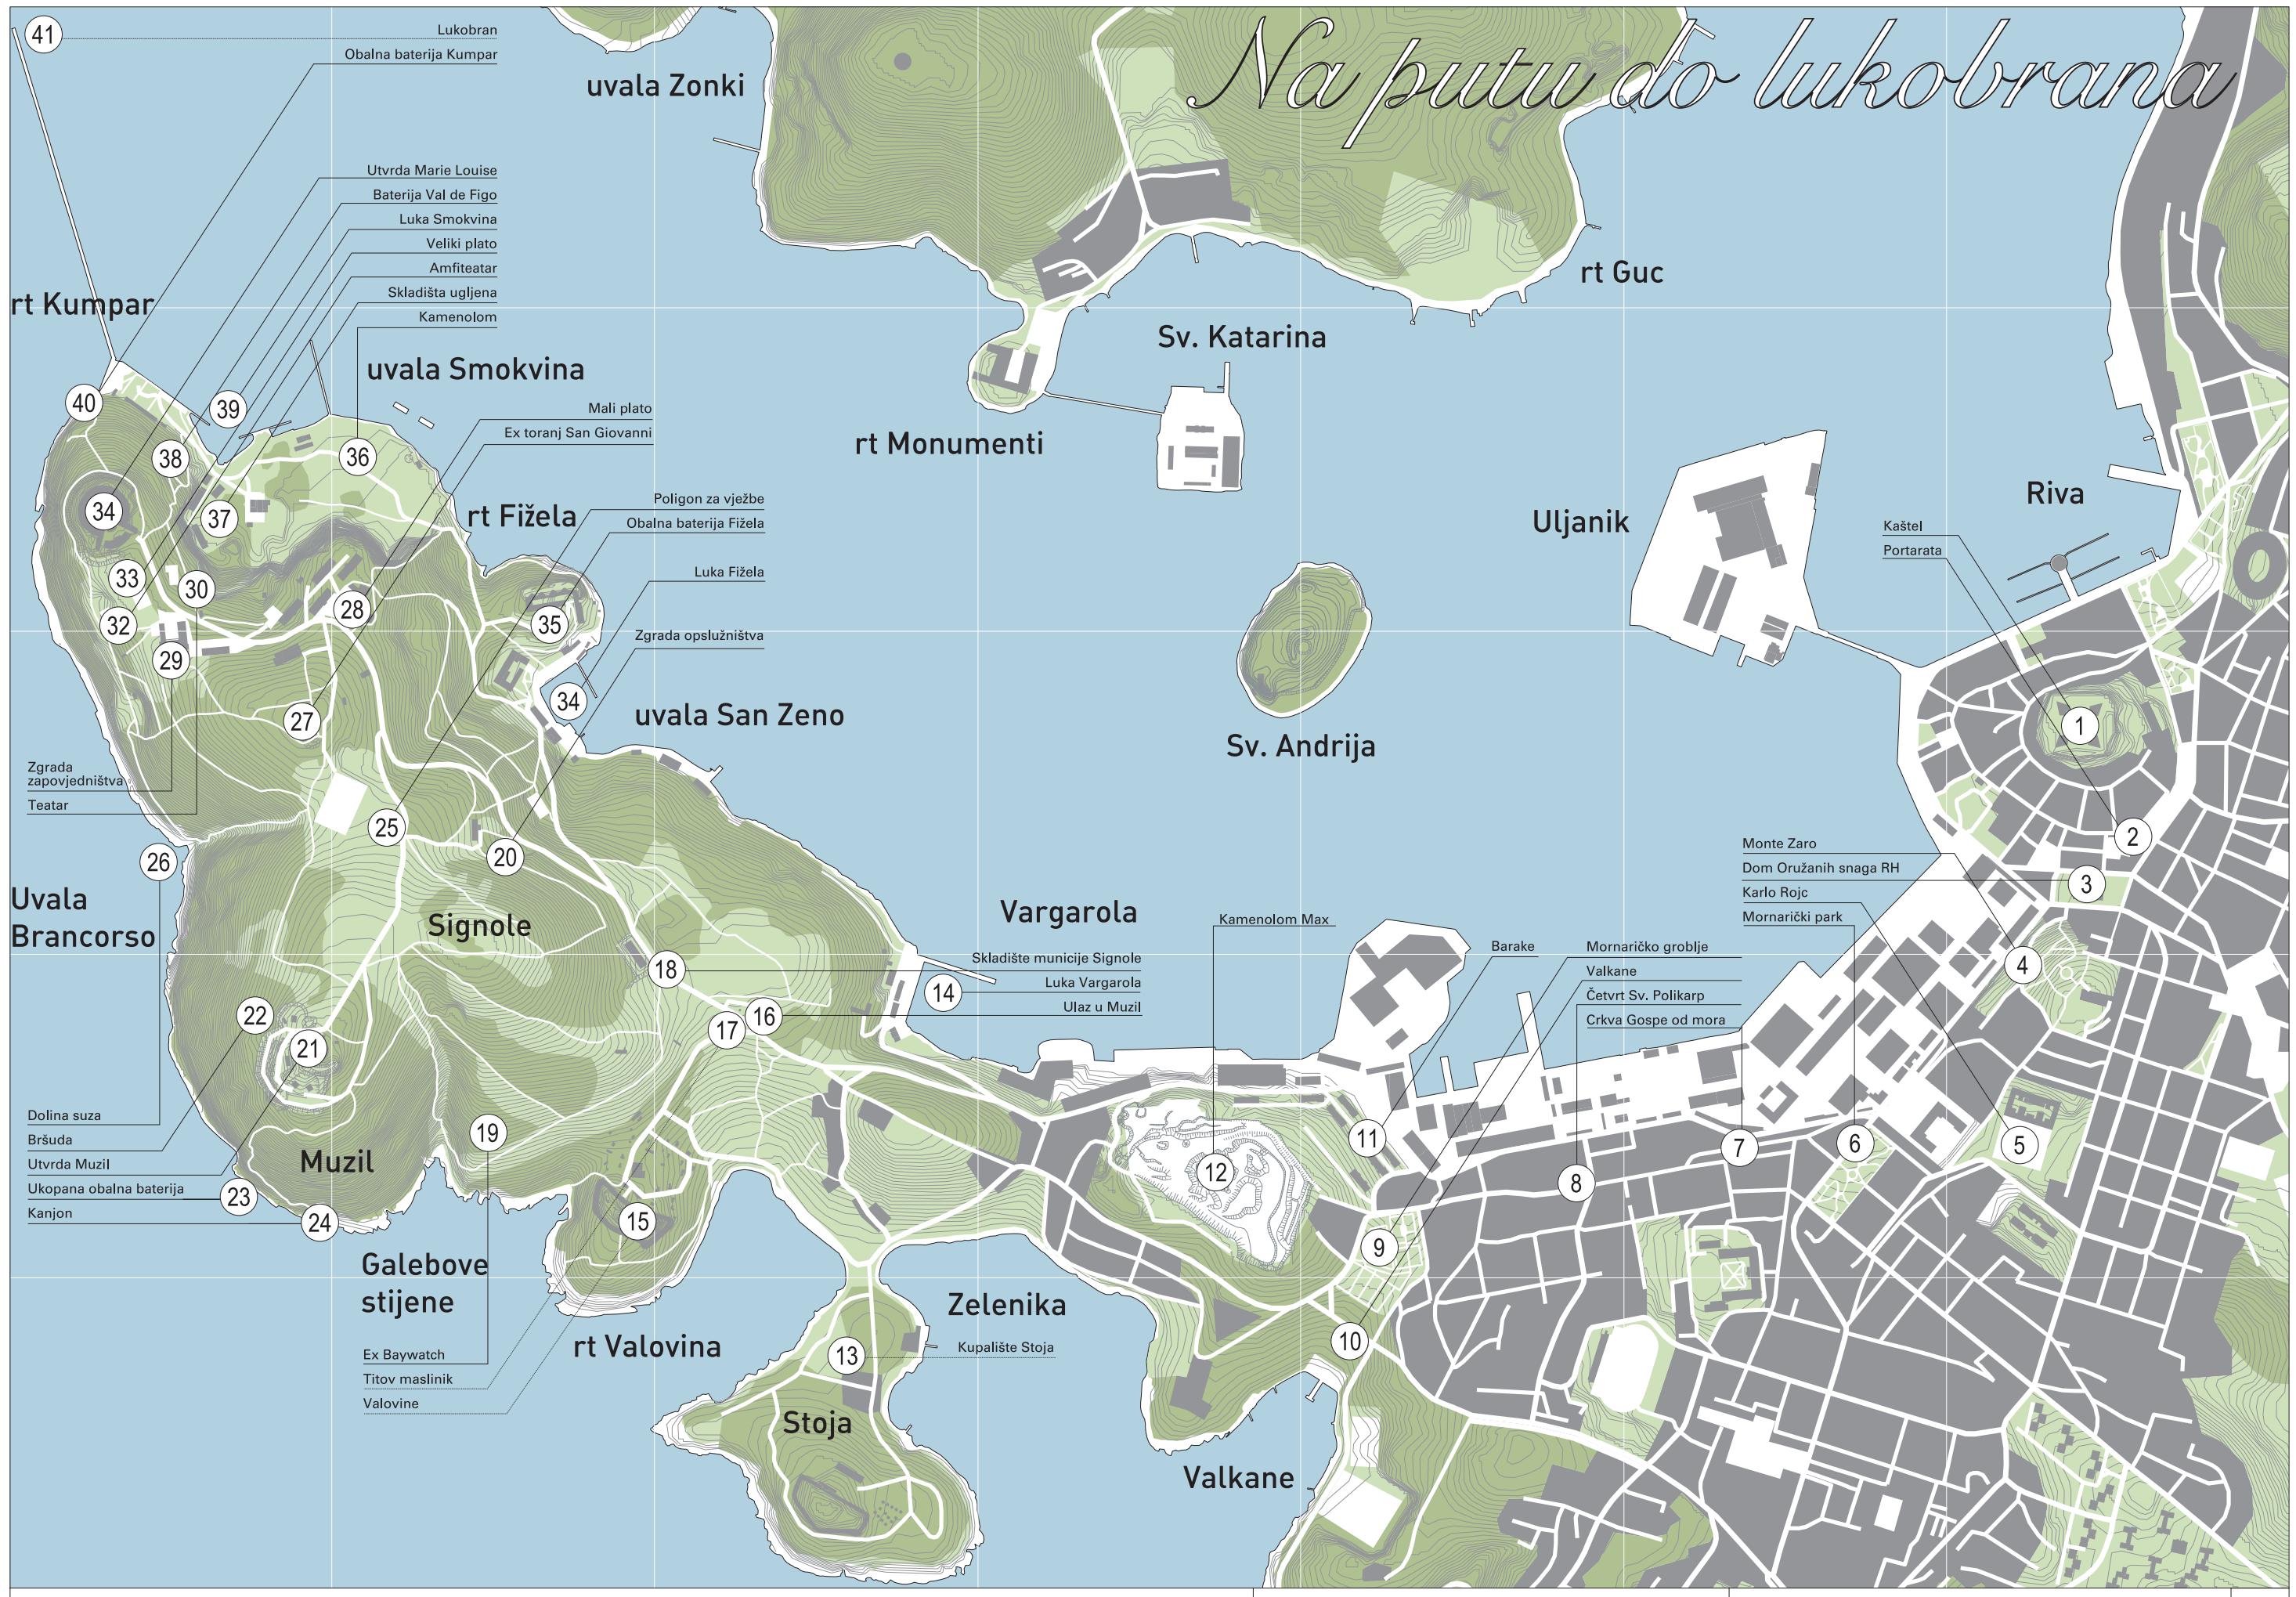

This study is useful not only to the experts but to the citizens of Pula also, who can finally be informed about (still) unknown area of the city. By providing citizens with valid information about the current situation they can better prepare for public debate about the future of Muzil, since all debates until now were lacking in proper information.

Permission to access Muzil was requested by prof. dr. sc. Lenko Pleština, dean of Zagreb Faculty of Architecture and was sent in June 2009 to the Services for Public Relations and Information in Croatian Ministry of Defence. Ministry permitted a two week access to Muzil for 30 persons. Working team consisted of architects : Ana Boljar, Ivana Debeljuh, Vjekoslav Gašparović, Juraj Glasinović, Emil Jurcan, Ida Križaj, Iva Marčetić, Jerolim Mladinov, Marko Perčić, Helena Sterpin, Edna Strenja, Leonid Zuban, students of architecture: Aleksandar Ćelović, Ana Grbac, Ana Habijanec, Dean Klemenc, Maja Lešnik, Kristina Perkov, Sara Perović, Denis Rubinić, Luka Tomić i Mirna Udovčić, civil engineer Igor Bukarica, forester Christian Gallo, biologist Ira Maslovar and historian Goran Šaponja. Official host on Muzil was master sargent Stjepan Slonka.

Every participant examined Muzil from personal position of its education and the material gathered here in a relatively short period of time should be useful to the citizens and experts in order to develop future studies and to familiarize with the area so that it can be transformed for the general benefit of all citizens of Pula.

Na putu do lukobrana

Pula je naseljena još od najstarijih vremena. Zahvaljujući povoljnem položaju u zaljevu s izvorima vode, pružala je savršenu zaštitu svojim stanovnicima koji su se smjesili na okolnim brdima.

Na prapovijesnoj karti Puljštine Klara Buršić-Matijašić Muzil je označila kao hipotetsko nalazište budući da se nalazi u vojnoj zoni već 150 godina i nisu provedena potrebna istraživanja. No, smatra se da je na mjestu prve austrougarske utvrde bila prapovijesna gradina vjerojatno već u brončano doba. Pulska brda kao što su Monte Grosso, Monte Zaro i Kaštel istražene su gradine pa možemo pretpostaviti da su uz Muzil bile naseljene i uzvisine Monte Ghigo i Sv. Juraj.

Mnogi povjesničari smatraju da su austrougarske vlasti gradnjom utvrda na strateškim položajima uništile veći dio brončanodobnih i željeznodobnih gradina kao što je to slučaj s Monte Grossom i Valmarinom. Naime, prilikom izgradnje tvrđave Monte Grosso pronađena je ostava brončanodobnih sjekira, a na Valmarinu je istražen monumentalni brončanodobni tumul. Poznato je da su u rimsko doba u pulskoj luci bile smještene mnoge vile, a jedna od njih i na području Fiže.

Sam naziv Muzil je po istraživanjima Dantea Olivierija lombardijsko-mletačkog podrijetla i označava zatvoreni pašnjak. U tu je svrhu Muzil i korišten. Naime, stanovnici Pule na odlične su pašnjake poluotoka Muzil dovodili općinske konje, a paša se djelomično i iznajmljivala privatnim osobama.

Prilikom naseljavanja 1561. god., odnosno 1671., Bolonjci, a potom i risanski hajduci, radi obrade zemlje su između ostalog potraživali i područje Muzila, ali im gradske vlasti to nisu dozvolile ističući da je Muzil već u rukama građana koji su ga samostalno zakupili i na njemu pasli konje. U sljedećim stoljećima obrana grada Pule temeljena je na izgradnji utvrde na Kaštelu i utvrde na otočiću Sv. Andrija. Muzil je još neko vrijeme ostao netaknut i kao sastavni dio pulskog agera koristio je građanima grada Pule.

Pula has been settled since ancient times. Thanks to a favorable position in the bay with water springs, it provided the perfect protection for its residents who settled on the surrounding hilltops.

On the prehistoric map of Pula the archeologist Klara Buršić-Matijašić marked Muzil as a hypothetical archeological site, but due to 150 years of military presence the necessary archeological research has never been done. It is considered that a prehistoric hillfort was located on the site of the first Austro-Hungarian fort, Marie Louise, probably dating back to the Bronze Age. The hills of Pula, such as Monte Grosso, Monte Zaro and Kaštel are already explored hillforts, so it is assumed that apart from Muzil, the hills Monte Ghiro and Sv.Juraj were also inhabited.

Many historians consider that Austro-Hungarian authorities destroyed the majority of Bronze Age and Iron Age hillforts by building their forts on strategic locations, as is the case with Monte Grosso and Valmarin. Namely, a storage of Bronze Age axes was found during the construction of the fort at Monte Grosso, while on Valmarin a huge Bronze Age tumulus was found.

It is known that in the Roman times plenty of villas were situated within the Pula bay, one of them being Fižela - the northern coast of Muzil.

The name Muzil, according to research by Dante Olivieri, is of Lombardian-Venetian origin and indicates an enclosed pasture. The area of Muzil was indeed used for that purpose. In fact, inhabitants of Pula used to keep municipal horses on the pastures of the Muzil peninsula. The pastures were also partly rented to private persons.

During the settlements in 1561 and 1671, the Bolognians, and later the Risans' Hajduks, demanded the area of Muzil for agricultural purposes, but the city authorities denied the request explaining that the inhabitants of Pula were already using the peninsula and were pasturing their horses there.

In the following centuries the defense of the city was based on the construction of forts on Kaštel and the little island Sv.Andrija. Muzil was kept intact and used by inhabitants as a part of the Pula ager (latin: field).

Poluotok Muzil vojnopomorskom strateškom točkom postaje tek nakon pada Napoleona 1813. god., odnosno povratkom austrijske vlasti na obale istočnog Jadrana.

Radi zaštite pulske luke i zaljeva Austrija počinje sanaciju postojećih utvrđenja te izgradnju novih utvrda. Uz postojeći Kaštel i napoleonsku bitnicu na otoku Sv. Andrija grade se obalna bitnica Zonchi na sjeveru Pulskog zaljeva te zemljana utvrda Marie Louise na zapadu zaljeva, tj. na Muzilu. Na taj se način oko 1820. god. pomiče crta obrane na sam ulaz u Pulski zaljev, a Muzil kao najpre-glednija i najviša točka zaljeva dobiva strateški značaj te s njim i prve obrambene građevine.

Nakon što je odlučeno da postane glavnom ratnom lukom Habsburške Monarhije, Pula se utvrđuje prvim u nizu prepravljanja postojećih utvrđenja i gradnjom petnaestak novih okolnih utvrda. Tada i muzilska utvrda Marie Louise dobiva konačni oblik i postaje najvećom utvrdom kružnog tipa na Jadranu, pa i šire.

Pulski zaljev postaje sigurnim sidrištem izgradnjom lukobrana na rtu Kumpar. Prilikom gradnje lukobrana na Muzilu se iskapaju podzemna skladišta za smještaj protubrodske mina i torpeda, grade se objekti kao što su skladišta, zgrade i radionice, postavljeni su mostobrani za popunjavanje zaliha većih brodova, a grade se i pristaništa za primanje manjih brodova ratne mornarice.

Iako spremna za svjetski rat, tvrđava Pula s Muzilom kao najjačom karikom u svojem obrambenom lancu nije imala priliku pokazati vlastitu vatrenu moć.

Nakon propasti Austro-Ugarske Monarhije opada i značaj Pule kao važne ratne luke, stoga Kraljevina Italija već 1922. god. počinje sustavno razoružavanje i demoliranje utvrđenja. I tada, iako većinom razoružano, područje Muzila s lukobranom ostaje u vojnim rukama kao čuvar ulaza u Pulski zaljev.

Nakon kapitulacije Italije, njemačke snage 12. rujna 1943. preuzimaju zapovjedništvo nad Pулom koja ubrzo dobiva status utvrđenog grada i time potpada pod direktno Führerovo zapovjedništvo. Zbog ubrzane izgradnje obrambenih linija pri utvrđivanju podmorničke baze Pula, Nijemci koriste obrambenu ostavštinu Austro-Ugarske. Kako se 2. svjetski rat primiče kraju, njemačke snage se utvrđuju na poluotoku Muzil na liniji Tvornica cementa - kupalište Valkane. Iako okruženi jedinicama NOVJ-a i unatoč Hitlerovoj zapovijedi o potpunom uništenju pri povlačenju, njemački vojnici se početkom svibnja 1945. u potpunosti povlače na Muzil da bi pošteldjeli Pulu od nepotrebnog razaranja. Plan izvlačenja i pokušaj da se s preostalim brodovljem s Muzila Nijemci u Trstu predaju savezničkim snagama propada zbog djelovanja partizanske mornarice s mora i topništva iz Štinjana, a njemačke jedinice prikovane za Muzil dočekuju kapitulaciju Njemačke.

Za angloameričke uprave područje Muzila gubi važniji značaj te se ondje deponira ratni materijal. Zbog nezbrinjavanja protubrodskih podvodnih mina događa se najveća pulska poslijeratna tragedija, uz vojnu zonu Muzil, u uvali Vargarola - u kolovozu 1946. uslijed eksplozije gine preko 116 osoba.

U jesen 1947. god. Pula je pripojena Hrvatskoj i Jugoslaviji, a područje Muzila prelazi pod zapovjedništvo mornarice koja ga proglašava zabranjenom zonom. U vrijeme Informbiroa na južnoj strani ispod obalne baterije Muzil ukopava se sustav podzemno povezanih topničkih bitnica koji čini Muzil neosvojivim s morske strane.

Stabilizacijom odnosa s Italijom, 1977. god. glavnina pomorskih jedinica Mornaričko-tehničkog školskog centra iz Pule seli se u splitsku Loru, a na Muzilu ostaju uglavnom jedinice Mornaričko-nastavnog centra i jedinice počasne namjene.

Nakon odluke o povlačenju JNA s područja RH Muzil postaje tempirana bomba, tj. veliko odlaglište ratnog materijala i tehnike, uz čiju je ogragu postavljeno i minsko polje. U noći s 15. na 16. prosinca 1991. s Muzila isplovjava brod s posljednjim vojnicima JNA čime završava još jedna smjena vojski na zapadnom pulskom poluotoku. U veljači 1992. HV uspostavlja Središte za odgoj i obuku vojnika Muzil. Od rasformiranja postrojbe Središta za obuku pješaštva Muzil, 9. srpnja 2007., najveći pulski poluotok čuva tek nekolicina pripadnika 1. gardijske brigade Tigrovi.

The Muzil peninsula became a military and naval strategic point only after the fall of Napoleon in 1813 and the return of the eastern coast of the Adriatic under the Austrian governance.

In order to protect Pula harbor, Austria began the rehabilitation of existing fortifications as well as the construction of new ones. In addition to the existing fort on Kaštel and Napoleons' battery on the island of Sv.Andrija, a new coastal battery, Zonchi, was constructed on the northern side of the bay, as well as the earthwork fort, Marie Louise, in the western side of the bay, i.e. Muzil. Thus, in the year 1820, the line of defense was transferred to the entrance of Pula bay, while Muzil, as its highest point, became of strategic importance and got its first fortifications.

After the decision was taken to make it the main army harbor of the Austro-Hungarian monarchy, Pula was fortified by rehabilitating the existing fortifications and constructing a chain of 15 new forts. It was then that the fort Marie Louise in Muzil got its final form and became the largest round fort in the Adriatic.

Pula bay was turned into a safe port by the construction of the breakwater on cape Kumpar. During the construction of the breakwater, underground depots were hollowed out in Muzil for the storage of the sea mines and torpedoes. Warehouses were built, as well as other buildings and workshops, bridge-heads were installed for the supply of large ships, and piers were built for smaller navy ships.

Although it was ready for a world war, the fortified Pula, with Muzil as the strongest point in its chain of defense, never got the chance to reveal its battle capacity.

After the fall of the Austro-Hungarian monarchy, the importance of Pula as a military harbor decreased. As such, the Kingdom of Italy had begun to systematically disarm and demolish the fortifications by the year 1922. But even at that time, and even when disarmed, Muzil and its breakwater remained under military control as the guardian of the entrance to Pula bay.

After the capitulation of Italy, on September 12, 1943 the German military forces took over the control of Pula, which got the status of a fortified city and due to this came under direct command of the Führer. Due to the rapid construction of lines of defense during the fortification of Pula as a submarine base, the Germans used the fortification heritage of Austro-Hungary. As World War II was about to end, the German military forces set on the peninsula of Muzil, on the line of the cement factory - Valkane beach. In spite of being surrounded by units of NOVJ (People's Liberation Army of Yugoslavia) and in spite of Hitler's order of its complete destruction during the retreat, German soldiers in early May 1945 withdrew completely to Muzil to spare Pula of unnecessary destructions. The plan of withdrawal and the attempt of hand over of the German troops with the remaining naval fleet to the Allies in Trieste failed because of Partisan naval actions from the sea and artillery from Štinjan, so the German troops awaited the capitulation of Germany bound to Muzil.

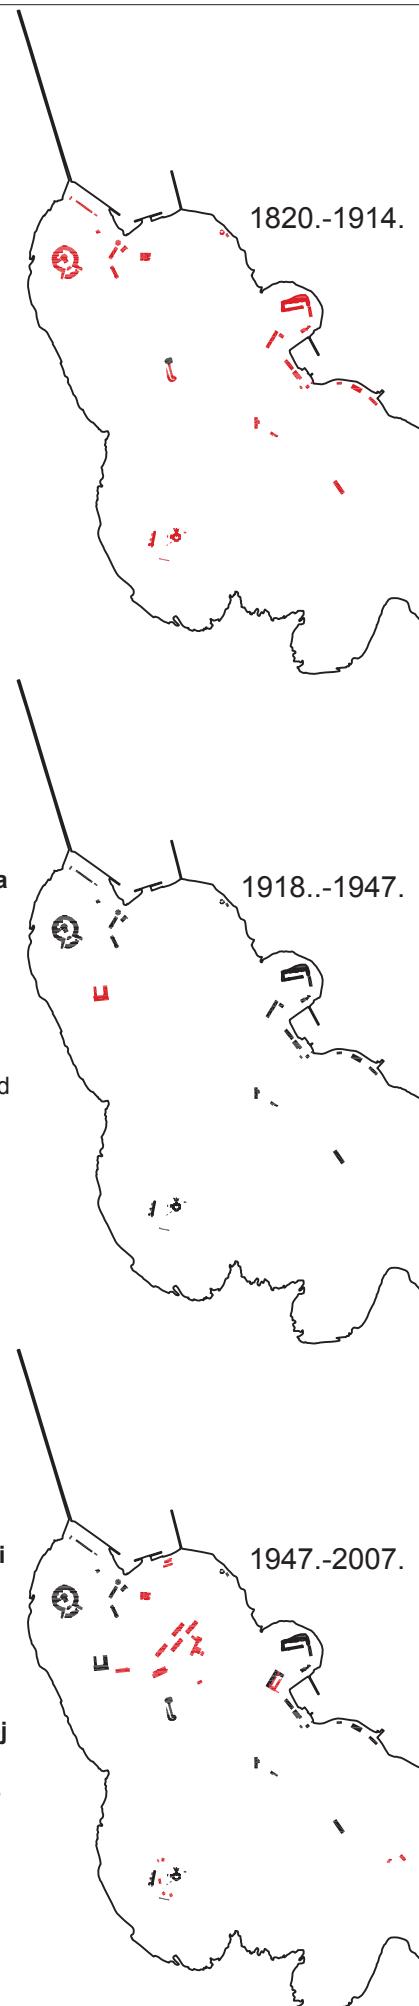

Throughout the Anglo-American governance, the area of Muzil lost its major importance and military equipment was deposited there. Because of the inappropriate storage of naval underwater mines, Pula's largest post-war tragedy occurred in August 1946 in Vargarola bay by the military zone, Muzil, when an explosion killed over 116 people.

In the autumn of 1947, Pula was adjoined to Croatia and Yugoslavia, and the area of Muzil came under the command of the Naval forces which declared it a forbidden zone. In the time of Cominform (1947-1956) on the south side of Muzil, a system of batteries connected with underground corridors was constructed, which made Muzil unconquerable from sea.

Through the stabilization of relations with Italy, in 1977 the majority of naval units pertaining to the Naval Technical School of Pula were relocated to Lora, Split, while units pertaining to the Naval Educational centre and units of honorary purposes mostly remained in Muzil.

After the decision of withdrawal of the JNA from the territory of RH, Muzil became a timebomb, i.e. a huge depot of military equipment along whose fence a minefield was set. On the night of December 15 - 16 1991 a ship with the last soldiers of the JNA departed from Muzil, which marked the end of yet another switch of armies on the western peninsula of Pula. In February 1992, HV established the Centre for Education and Training of soldiers in Muzil. Since the disbanding of the unit of the Centre for Training of infantry in Muzil on July the 9th 2007, Pula's largest peninsula is guarded by a few members of the 1st Guard Brigade - Tigers.

Godina izgradnje: 1. FAZA - prije 1820. Odvojena poljska (zemljana) utvrda s kamenim potpornim zidovima i parapetima, potkovastog oblika, sa stražarnicom, barutanom i četvrtastom redutom iz 1838. usred dvorišta s puškarnicama i zemljanim nasipom.
2. FAZA - 1857. do 1862. 12.6.1859 završena gradnja najveće pulske kružne utvrde promjera 110m, tipa "pulski toranj" s internim dvorištem iz dva bočna kaponira do ulaza.
3. FAZA - 1869. Jugoistočno od utvrde, usmjereni prema ulazu u zaljev, izvedena moćna bitnica sa 30 merzera.
4. FAZA - 1861.-1883. Dodatni visoki nasipi, koji okružuju utvrdu sa sjevera, zapada i juga s topničkom bitnicom na tim nasipima 1878. (Izvor: Atilio Krizmanić, "Pulska kruna: pomorska tvrđava Pula, fortifikacijska arhitektura austrijskog razdoblja, Žminj : Čakavski sabor, 2008.)

Year of construction: 1st PHASE – before 1820. Detached earth-work fort, horseshoe shaped, with stone-work retaining walls and parapets, with a sentry-box and a powder storage. A square redoubt in the inner court, with gun loops and an earth embankment, is dated 1838.
2nd PHASE - from 1857 to 1862. On June 12, 1859 Pula's largest round fort is completed, 110 meter in diameter, with an inner court and two side entrances with caponiers.
3rd PHASE - 1869. South-east of the fort a mighty battery is completed, with 30 cannons (420mm) pointed toward the entrance of the bay.
4th PHASE - from 1861 to 1883. Additional high earth embankments with cannon batteries are erected on the north, west, and south side of the fort.

Namjena: **Skladište od 1947. do 2007.**

Use: Warehouse from 1947 until 2007

Površina pod objektom: **8.670m²**

Footprint: 8.670m²

Ukupna tlocrtna površina: **12.236m²**

Gross surface area: 12.236m²

Sadržaj: **Spremišta, koridori, topovska gnijezda, centralni prostor**

Facilities: Storages, corridors, gun nests, a central circular space

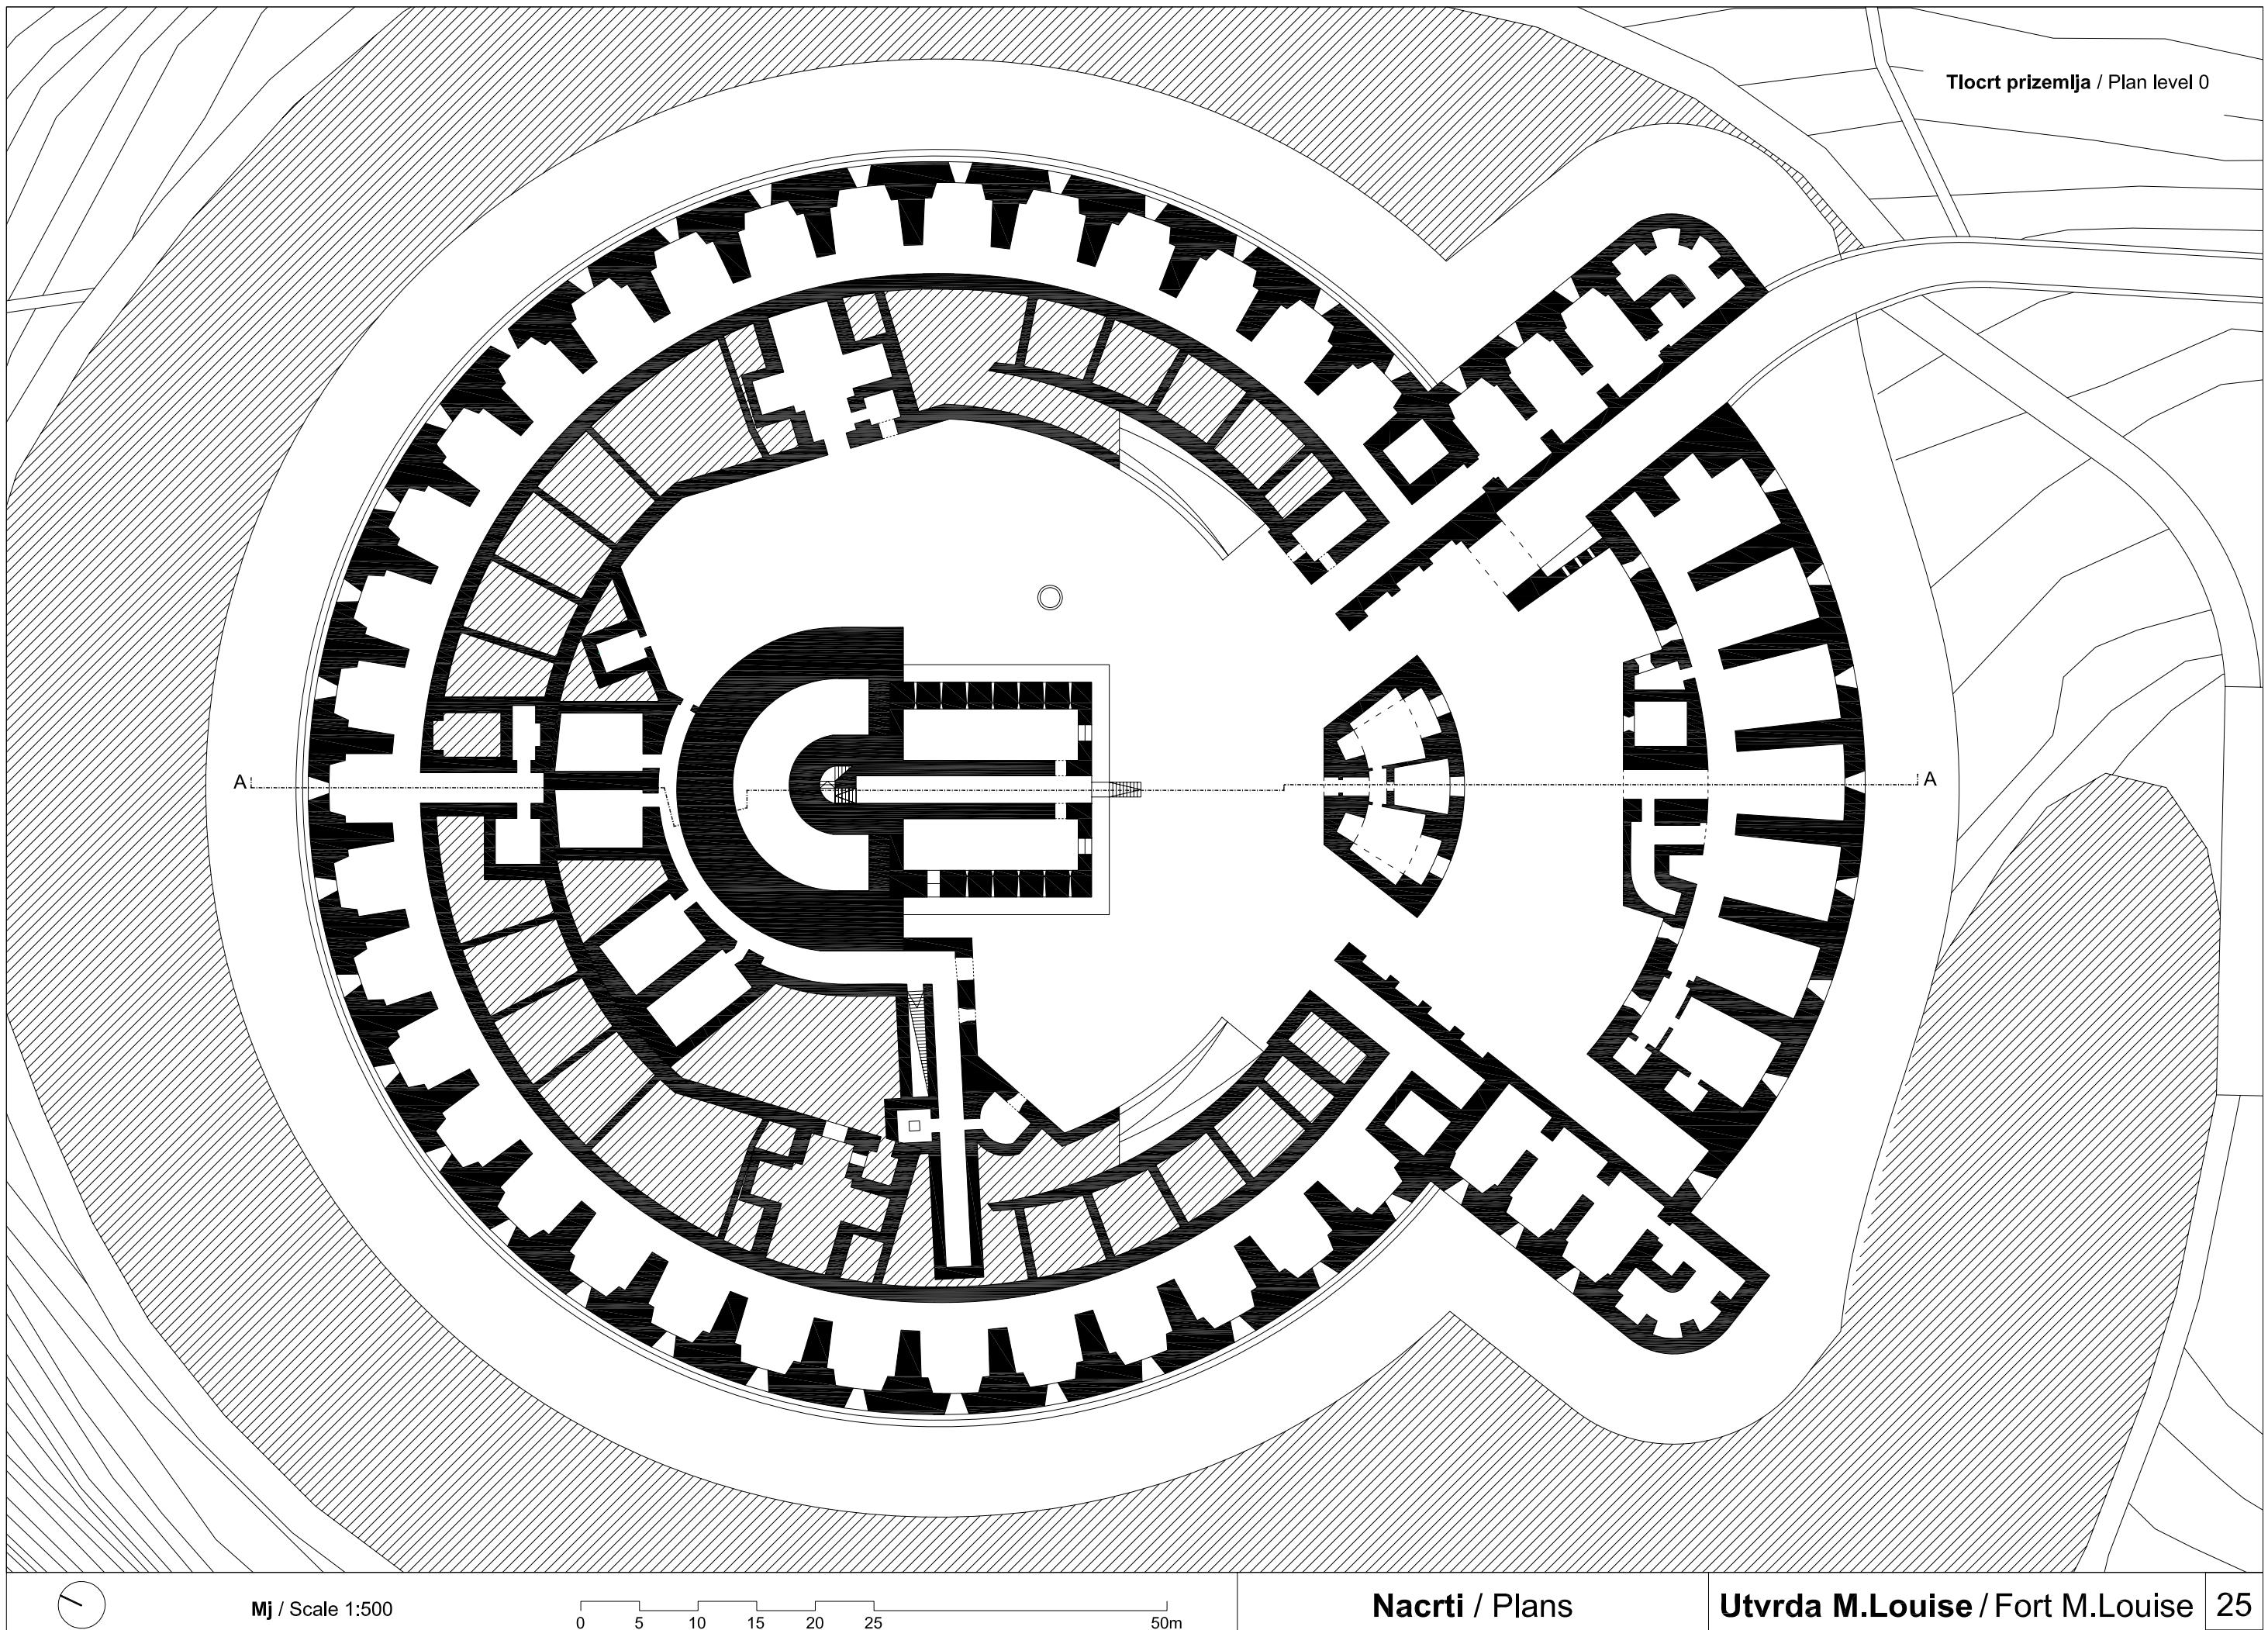

Opis: **Objekt je građen kroz nekoliko povijesnih perioda što je rezultiralo vrlo kompleksnim prostornim sklopom. Središnji prostor ima kružni svod, na terasu druge etaže vode dvije simetrične rampe, a radius građevine je imozantnih 110m. Neki prostori su, u procesima pregrađivanja, zatrpani i nedostupni.**

Description: The facility has been built during different historical periods which resulted in a complex spatial assembly. The central space is barrel vaulted, two symmetric ramps lead to the second floor terrace, and the diameter of the facility is 110 meter. Parts of the building were backfilled due to structure modifications.

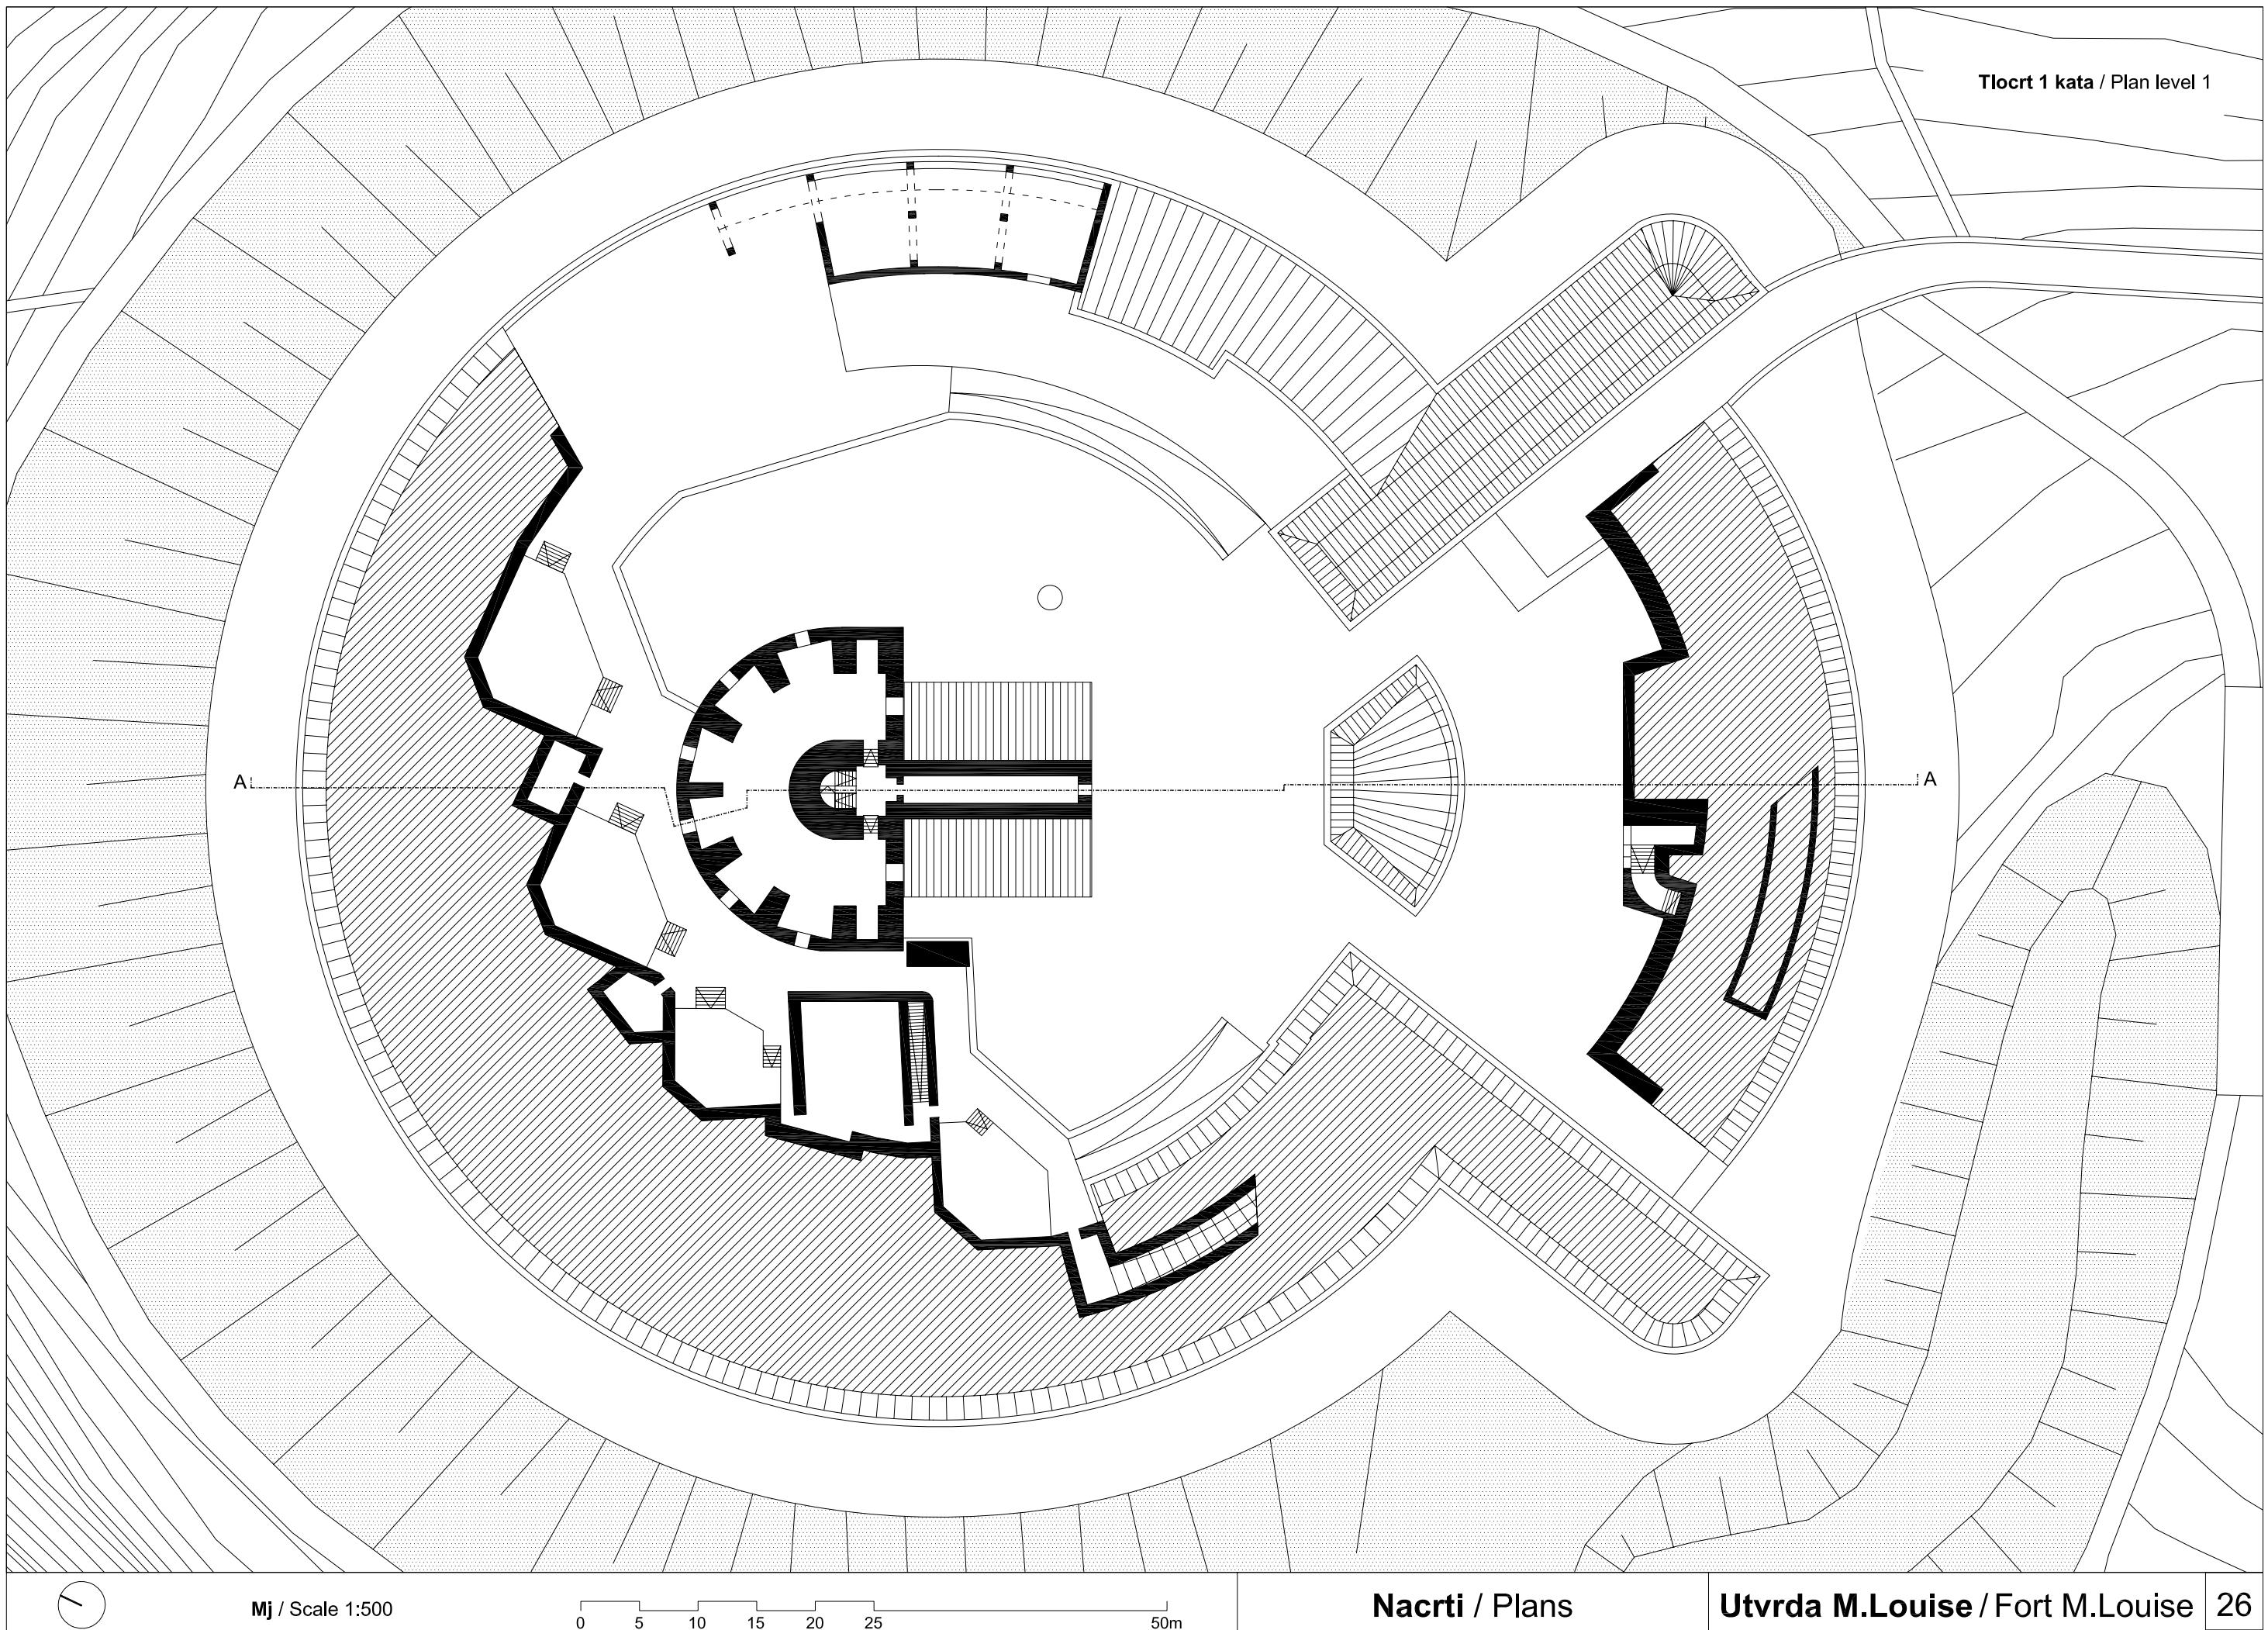

Stanje: **Kameni zidovi su u dobrom stanju, ali građevina nije upotrebljiva**

Status: Stone-work is in good shape, but the facility is not usable.

Godina izgradnje:	Od početka 1960-ih u više faza
Year of construction:	Since beginning of 60ies in more phases
Namjena:	Kuhinja s menzom, tuševi i teretana do 2007
Use:	Kitchen with canteen, gym and showers until 2007
Površina pod objektom:	2100m²
Footprint:	2100m ²
Ukupna tlocrtna površina:	2500m²
Gross surface area:	2500m ²
Sadržaj:	Kuhinja, kotlovnica, menza, dvorana, tuševi
Facilities:	Kitchen, boiler room, canteen, gym, showers
Opis:	Objekt se sastoji od nekoliko povezanih funkcionalnih cjelina sa vlastitim ulazima. Menza je prizemni objekt povezan s kuhinjom i dvoranom, ima ulaz s trga i četverostrešni krov pokriven kamenicom. Kuhinja ima kotlovcu u suterenu, četvrtostrešni krov, gospodarske ulaze sa sjeverne i južne strane, te dodatni objekt na istoku. Dvorana s tuševima je prizemni sklop s ravnim krovom i ulazom s trga. Pročelja su uglavnom ožbukana, mjestimice obložena kamenom.
Description:	The facility consists of several linked units with separate entrances. The canteen is a one-storey building linked to the kitchen and the hall, with an entrance from the square, and a clay-tiled hipped roof. The kitchen has boiler room in the basement, a clay-tiled hipped roof, entrances on the north and south front, and an additional facility on the east. The gym with showers is a one-storey facility with a flat roof, and an entrance from the square. Facade walls are mainly plastered, partly lined with stone.
Stanje:	građevina je uporabljiva, nedostaje oprema kuhinje
Status:	the building is usable, the kitchen equipment is missing

Godina izgradnje: 1. FAZA - Od 1852. do 1855. Izgradnja i dovršenje kruže utvrde promjera 35m tipa "pulski toranj" s internim dvorištem i prednjim tambur dvorom.
2. FAZA - 1878. Topnička bitnica na utvrdi
3. FAZA - 1883./4. i 1909. Dograđena nova obalna poligonalna topnička bitnica povezana s kružnom utvrdom podzemnim skrivenim hodnikom - poternom, uronjena i skrivena u jake nasipe prema moru. Do utvrde je sagrađen uski kolosijek kojim se ljudstvu dovozila hrana, a za utvrdu streljivo. Ispod tvrđave iskopani su tuneli u kojima su bile smještene morske mine i torpeda, namjenjeni polaganju minskih prepreka. U torpednoj radionici obavljane su pripreme za ukrcaj na brodove. 20.12.1897. Na utvrdi je bio postavljen signalizacijski stup broj VII. (za radiotelegrafske veze)
4. FAZA – Nakon 1950-e izgrađen dvoetažni toranj sa uredima na vrhu utvrde. (Izvor: Atilio Krizmanić, "Pulska kruna: pomorska tvrđava Pula)

Year of construction: 1st PHASE – from 1852 to 1855. Construction of the round fort, 35 meter in diameter, with an inner court and an outer entrance court.
2nd PHASE – 1878. Construction of the cannon battery on the fort.
3rd PHASE - 1883/4 and 1909. Construction of the new polygonal coastal cannon batteries, hidden and sheltered by a strong embankment toward the sea, and connected to the fort by a hidden underground corridor - potern. A track was built to the fortress for food and ammunition supply. Tunnels were excavated beneath the fort and used as storage of sea mines and torpedoes for laying sea barriers. A torpedo workshop was used to prepare sea mines and torpedoes for embarkation. On December 20, 1897 a mast was erected on the fort for the purpose of radio-telegraphic communication.
4th PHASE - after 1950. A three storey tower with offices was erected on top of the fort.

Namjena: Sjedište izdvojene vojne postrojbe mornarice Obalna služba motrenja i obavljećivanja do 2007

Use: Headquarters for Navy Intelligent Service until 2007

Površina pod objektom: 5.474m²

Footprint: 5.474m²

Ukupna tlocrtna površina: 6.500m²

Gross surface area: 6.500m²

Sadržaj: Uredi, garaže, topovska gnijezda.

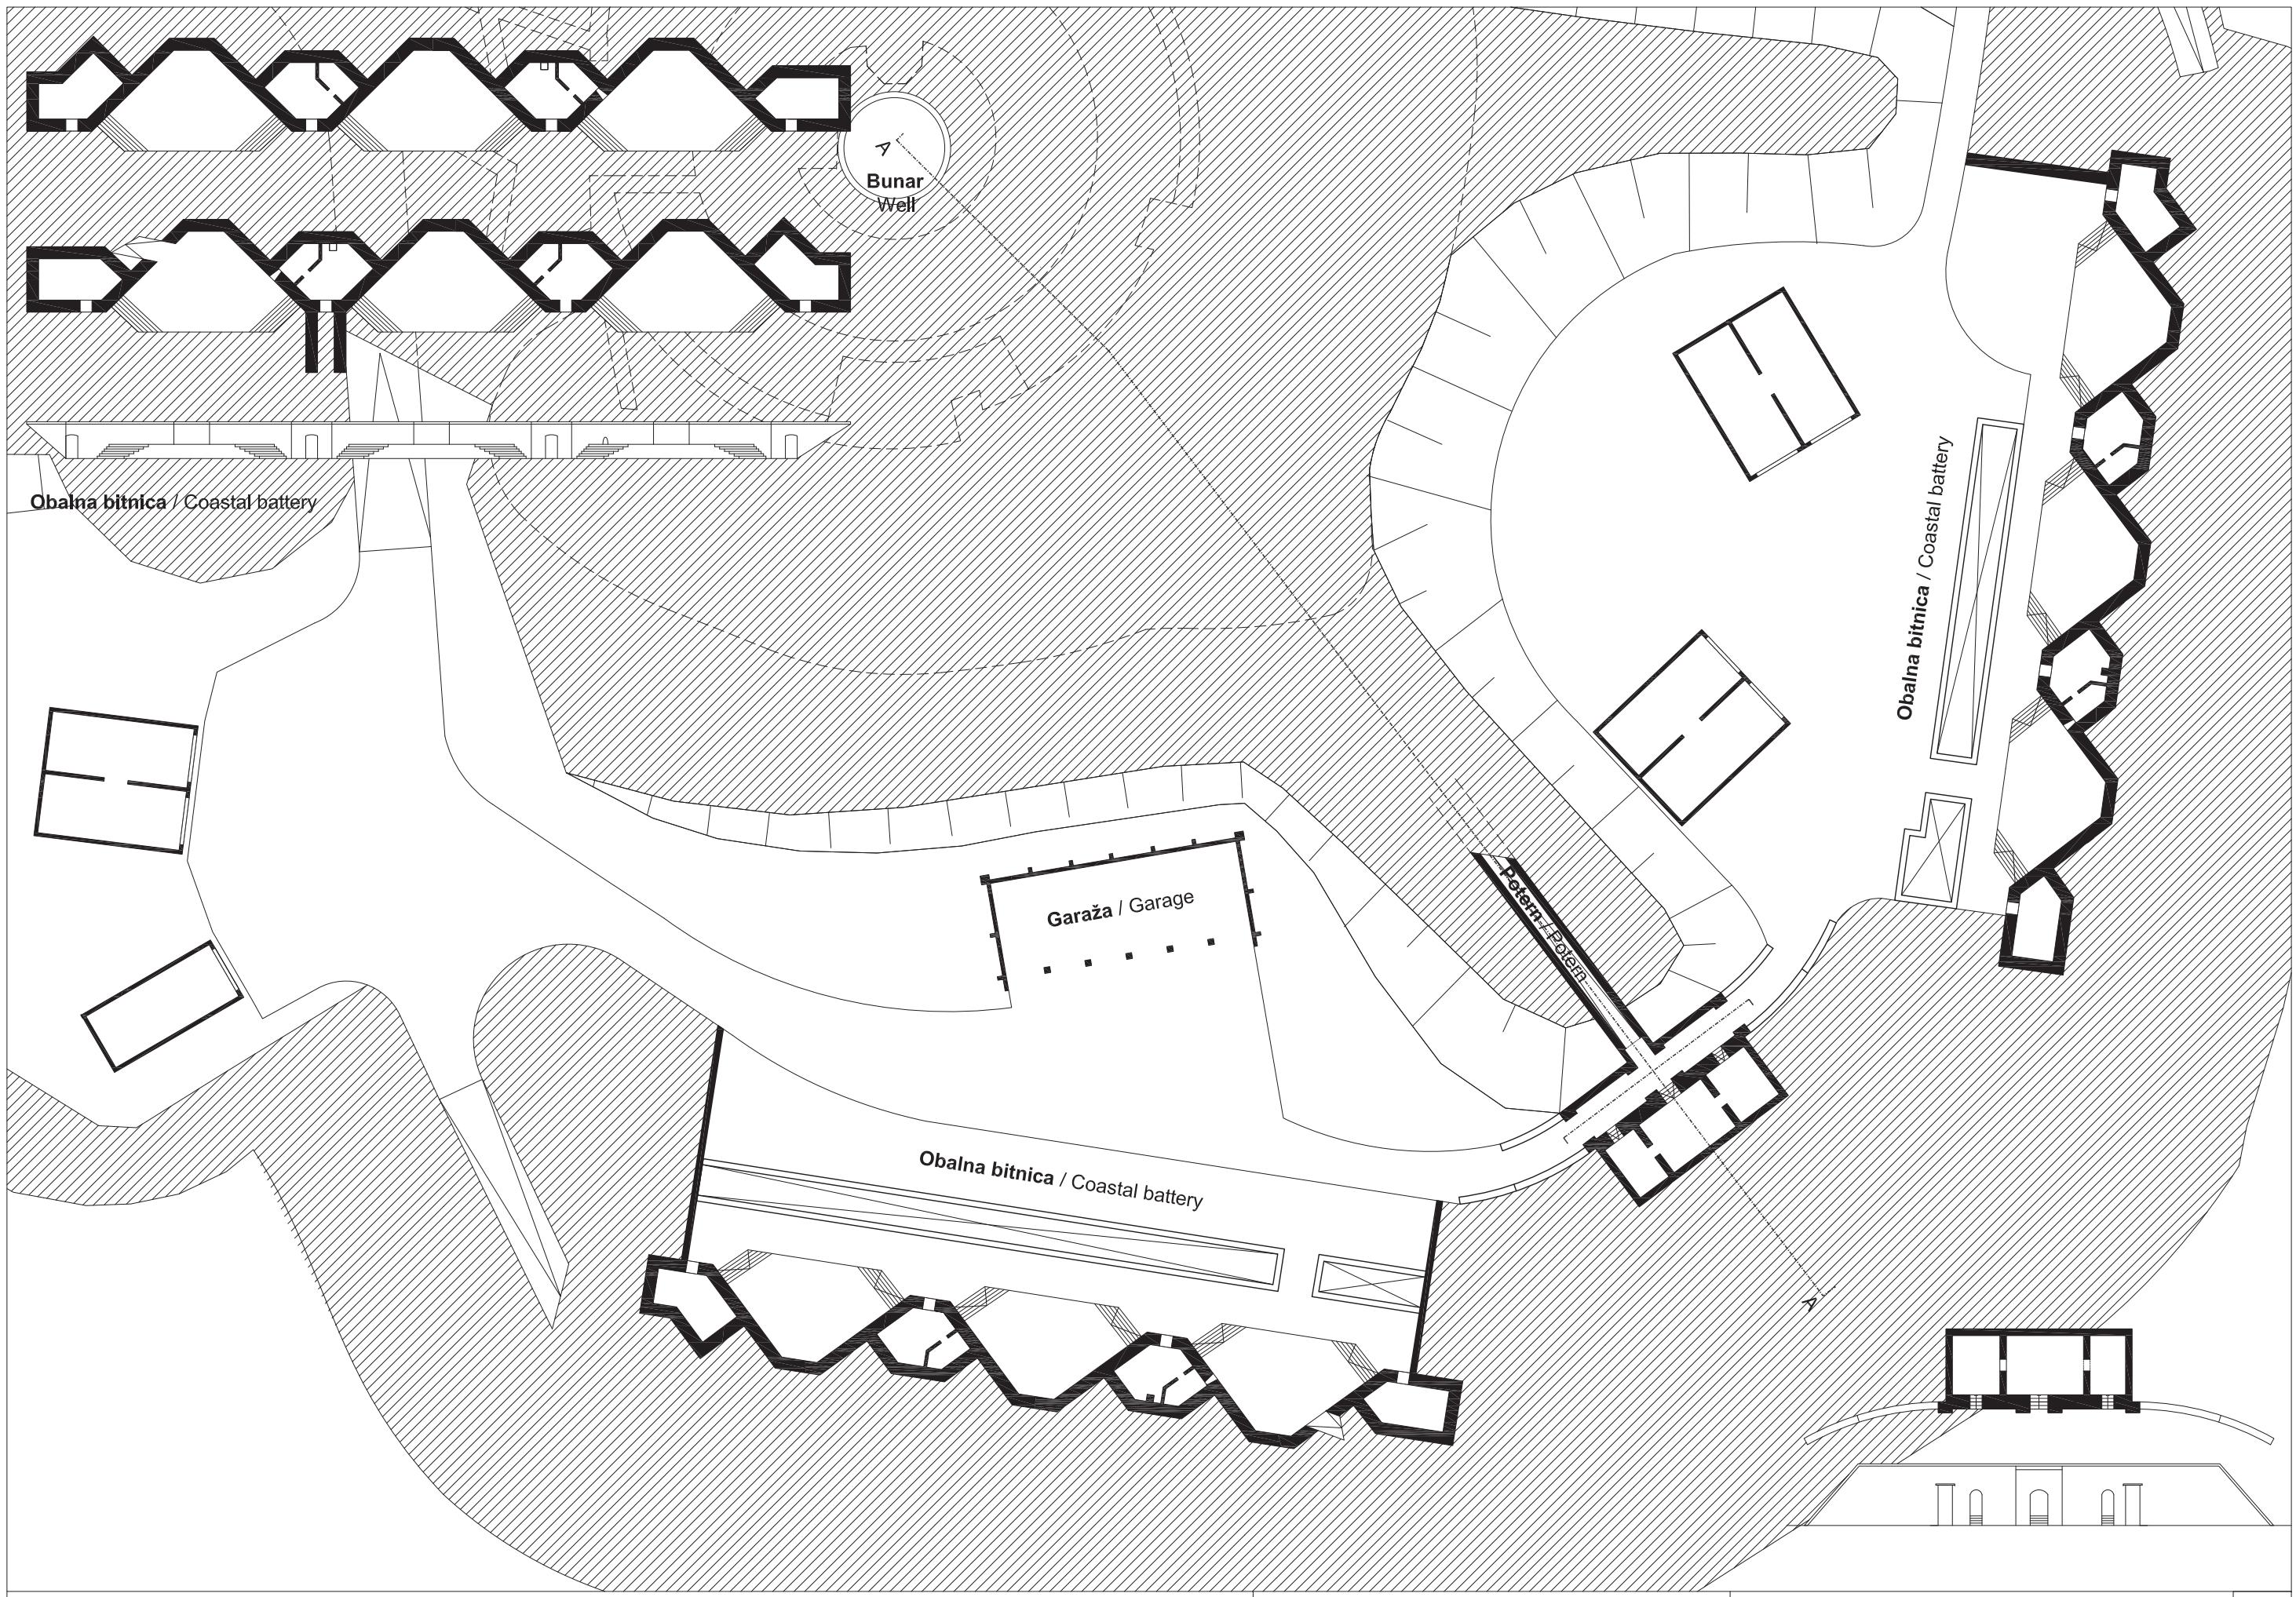

Facilities: Offices, garages, gun nests

Opis: Tipski oblik kružne utvrde jedina je utvrda koju je vojska koristila za uredi neprestano od 1855. do 2007. godine. Uz utvrdu je izgrađena bitnica i garaže za vozni park, a kompleks je povezan i sa topovskim gnijezdima na samoj obali

Description: This typical round fort was used for army offices ceaselessly from 1855 to 2007. Cannon batteries and garages were built by the fort, as well as cannon batteries on the seaside, connected to the fort.

Stanje: Građevina je izuzetno održana

Status: The facility is very well preserved.
